Why Does AWS Use Hazardous Waste Manifests for Non-Hazardous Waste Shipments?

Several years ago, in an effort to reduce the complexity and expense associated with the use of State-generated Uniform Hazardous Waste Manifests, the US Environmental Protection Agency simplified the requirement by adopting a Universal ***Uniform Hazardous Waste Manifest*** to be used throughout the United States for all hazardous waste shipments. Because most states that required a manifest for non-hazardous waste shipments used their State's Hazardous Waste form for that purpose as well, the ***Uniform Hazardous Waste Manifest*** essentially became the de-facto manifest to accompany both hazardous and non-hazardous waste shipments and its use is perfectly appropriate for that purpose.
