Milwaukee Water Council Learns AWS Services & Systems

On Monday, June 20, 2011, Advanced Waste Services opened the doors of its ChemWorks facility located in Milwaukee to host 38 members of the Milwaukee Water Council.

MILWAUKEE WATER COUNCIL

Mike Malatesta, President of AWS, welcomed the Water Council members and introduced them to General Manager, Jeff Dean, Operations Manager Andrew Acklam and its Director of Industrial Services Solutions, Tom Wendler, who led groups on tours throughout the various departments.

Members were introduced first-hand to how AWS receives, treats and recycles more than 80 million gallons of contaminated wastewater every year. They were briefed on AWS' sophisticated science and proven systems that are utilized to transform wastewater into clean, reusable water. The AWS truck wash and state-of-the-art laboratory were included in the stops on the tour.

The exceptional turnout for the

Water Council tour furthered AWS' community outreach initiative to open all treatment facilities to the community and to business groups to help educate them on the importance of AWS's role in serving its clients and community with Clean, Creative, Competitive and Convenient environmental experiences.

AWS partners with high schools, grade schools and colleges to educate students about its water treatment process and the protection and stewardship of this finite natural resource many often take for granted.

AWS is proud to play an active and positive role in the communities in which we live, work and do business. Its community activities include cash grants, in-kind donations and the volunteer service of

Laboratory Manager Bill Fowler demonstrates how sampling is performed in the plant's laboratory.

our employees who donate their talents and time in a host of different ways.
