Used Oil Testing Authorization

Last Updated: July 2012

Used Oil Definition

“Used Oil is any oil that has been refined from crude oil or any synthetic oil that has been used and as a result of such use is contaminated by physical or chemical impurities.”

[http://www.epa.gov/oecaagct/lrca.html#Used Oil Management Standards](http://www.epa.gov/oecaagct/lrca.html#Used%20Oil%20Management%20Standards)

The Used Oil Regulations outlined in 40CFR Part 279 indicate that used oil is presumed to be a Hazardous Waste **unless** it is **proven** not to be by the Used Oil generator.

Pursuant to **AWS' Used Oil Management Policy**, all Used Oil waste streams must be tested and certified to ensure they are non-hazardous prior to collection, transportation, treatment or recycling by AWS. Specifically, to comply with 40CFR 279, AWS requires:

- 1) All wastes meeting the definition of Used Oil (40CFR Part 279.1), regardless of water content, be profiled and managed as Used Oil in accordance with Used Oil Regulations.
- 2) All Used Oil wastes be tested to comply with the Rebuttable Presumption requirements prior to being accepted for transportation, treatment, processing and/or recycling at any AWS facility. Testing must include Total Halogens and, if the Total Halogens are >1000 PPM, additional testing must be performed by a certified laboratory for F001 and F002 Chlorinated Solvents per method 8021/8260 and PCB per method 8082.
- 3) Generators will also certify that the Used Oil is not a Hazardous Waste

Used Oil Testing and Fee Authorization – By signing below, Client authorizes AWS to test their Used Oil Waste to satisfy the Rebuttable Presumption requirements of 40CFR 279 and to **charge a fee of \$325** for this testing.

Client/Company Name: _____	Primary Contact: _____	
Generator Name: _____ (If different)		Profile # _____
Address: _____	Telephone: _____	PO#: _____
